

BusinessForgeSA: Standard Operating Procedure (SOP)

Document Ref: BF-SOP-2026-V1

Target Audience: Business Owners, Office Managers, HR Administrators, and Operations Personnel

1. What is BusinessForgeSA?

BusinessForgeSA is an automated, cloud-backed advisory console. It is designed to let an internal office assistant, admin, or business owner handle complex legal paperwork, cash flow tracking, and operational tasks without paying expensive external consultant retainers.

The platform is split into **3 Operational Pillars** containing **13 specialized engines**:

1. **Compliance Desk:** Keeping government inspectors off your back (COIDA, SETA, POPIA, ClaraLex).
2. **Profit Engine:** Protecting margins, predicting cash flow runways, and generating corporate quotes.
3. **Operations Desk:** Documenting company procedures, organizing staff reviews, and fixing hiring filters.

2. Daily/Weekly Operating Instructions

To get high-impact results from the console, the designated operator must follow these three simple steps:

Step 1: Initialize the Console

1. Navigate to your secure deployed website link.
2. Click the "**Launch System Console**" or "**Enter Access Token**" button.
3. Type in your authorized license token (e.g., GUEST2026) and click **Unlock Console**.

Step 2: Select Your Target Engine

- On the left-hand sidebar menu, click on the specific tool you need to run (for example, if you are analyzing a tricky contract clause, click **ClaraLex**; if you are checking your 90-day bank runway, click **FlowCast**).
- Read the brief guidance text at the top of the workspace to understand the primary focus of that specific module.

Step 3: Load Data & Execute

1. **Fill in the mandatory fields.** (Note: For training or to see what a perfect execution looks like, click the  **Load Demo Data** button to instantly populate the text screens with real-world South African examples).
2. Paste your raw business information, logs, or draft text into the large text area box.
3. Click the bright gradient button:  **Execute Local Audit Loop.**
4. Wait a few seconds for the system to securely process the telemetry.

3. Handling and Exporting the Outputs

Once the audit engine finishes running, the right-hand panel will display your **Audit Ledger Transcript**.

- **Review the Transcript:** The output is programmed to be brutally honest and actionable. Look specifically for the highlighted risk factors and compliance directives.
- **Generate a PDF Report:** Click the  **Export PDF Report** button at the top of the transcript screen. This will automatically generate a clean, official document branded with the *BusinessForgeSA* ledger header, ready for printing or filing in your corporate governance folder.

4. Operational Troubleshooting

If the software behaves unexpectedly, use this checklist before reporting a system error:

- **The screen stays blank after clicking Execute:** Ensure *all* text fields have data in them. The engine blocks execution if a mandatory parameters field is left entirely empty.
- **The system says "Connection Error":** Check your internet connection. The app requires a brief, stable connection to securely pass the data to the cloud network.
- **The buttons are frozen or won't click:** You are likely running an old, cached layout in your browser's memory. Hold down the Shift **key** and **click the Reload button** (or press Ctrl + F5) to force a hard refresh.
